i
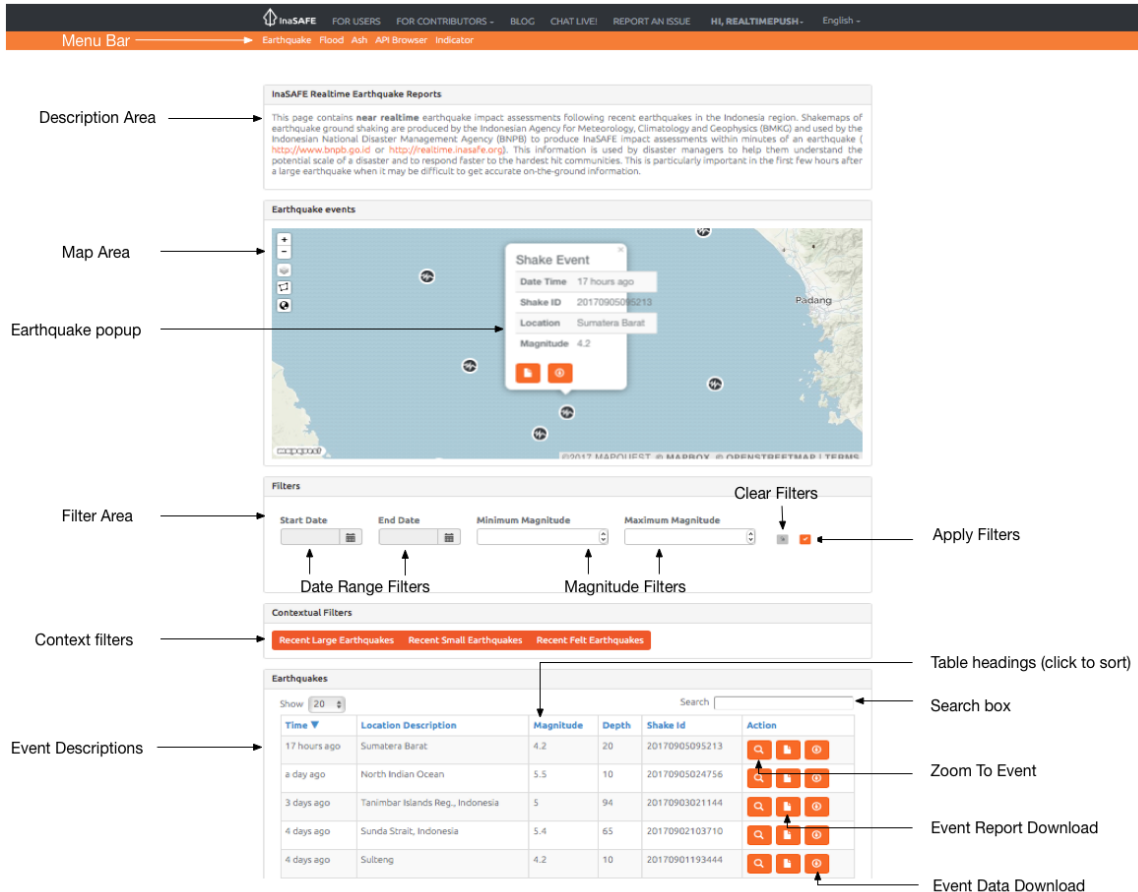

The InaSAFE Earthquake Realtime User Interface

"In this module we will explore the user interface of earthquake realtime and learn how to find relevant reports when you need them."

Earthquake realtime provides a quick and easy to use landing page that lets you browse historical reports generated by the platform. The map is interactive – you can scroll to zoom in and out (or shift-drag a box to zoom to a specific area), and click on event icons to view more information. New events are automatically posted to the page and will be shown whenever you refresh the page.

You try:

Goal: To explore the capabilities and features of Earthquake Realtime.

Go to the earthquake realtime website and use the tools an options you find there to discover the answers to the table on the right of this page.

Check your results:

Swap your list with a neighbouring group and see if they had the same results as you.

Name	Answer
What is the location description and magnitude of the largest earthquake recorded on the platform?	
How many earthquakes are there with a magnitude of >= 5?	
Find the report for event ID 20161207050336. What was significant about that event?

More about the Earthquake Realtime website

The earthquake history on InaSAFE Realtime can be filtered by date range and earthquake magnitude You can clear the filter by using the **Clear Filters** button. When you change the filter criteria, press **Apply Filters** button and the table and map will update to display the results of your filter.

If you **click** on any event in the map, a popup will display the elapsed time, shake ID, location and magnitude. You can dismiss the popup again by clicking on any area of the map does not have an earthquake marker.

You can use the **table headings** to sort the table contents. For example, clicking the 'Shake ID' heading will sort the records in descending and then ascending order of the summary table based on the shake ID (which essentially produces a date based sort).

You can use the **Zoom To Event** icon in each row to view that event on the map. You can download reports and map data for each event (which we will cover in separate modules).

The table only lists entries for each earthquake event recorded since InaSAFE Realtime Version 3 was introduced – we have not retrospectively processed shake events prior to that date.

When there are a large number of filtered (or unfiltered) records, the summary table will **paginate**. You can adjust how many records are shown on each page and use the pagination buttons underneath the table to jump from one page of results to the next.

Check your knowledge:.

1. **The realtime web site allows you to upload shake events after which it will generate new earthquake reports.**
   a) true
   b) false
2. **Mark all the correct statements:**
   a) The realtime platform displays shake events from around the globe.
   b) You can filter the shake events by depth.
   c) When you zoom out on the map, the points will cluster. The number on the circle indicates the number of events in that region.
